1. **GENERAL**

1.1 SCOPE

This specification details the ratings, physical and electrical characteristics, test and inspection data for Capacitors, Chip, Tantalum, Solid Electrolyte, based on Type 2010. It shall be read in conjunction with ESA/SCC Generic Specification No. 3011, the requirements of which are supplemented herein.

1.2 RANGE OF COMPONENTS

The range of capacitors covered by this specification is scheduled in Table 1(a).

1.3 MAXIMUM RATINGS

The maximum ratings, which shall not be exceeded at any time during use or storage, applicable to the capacitors specified herein, are as scheduled in Table 1(b).

1.4 PARAMETER DERATING INFORMATION

The parameter derating information applicable to the capacitors specified herein, is shown in Figure 1.

1.5 PHYSICAL DIMENSIONS

The physical dimensions of the capacitors specified herein, are shown in Figure 2.

1.6 FUNCTIONAL DIAGRAM

The functional diagram of the capacitors specified herein, is shown in Figure 3.

2. APPLICABLE DOCUMENTS

The following document forms part of this specification and shall be read in conjunction with it:-

(a) ESA/SCC Generic Specification No. 3011 for Capacitors, Chip, Tantalum, Solid Electrolyte.

3. TERMS, DEFINITIONS, ABBREVIATIONS, SYMBOLS AND UNITS

For the purpose of this specification, the terms, definitions, abbreviations, symbols and units specified in ESA/SCC Basic Specification No. 21300 shall apply

4. **REQUIREMENTS**

4.1 GENERAL

The complete requirements for procurement of the capacitors specified herein are stated in this specification and ESA/SCC Generic Specification No. 3011 for Capacitors, Chip, Tantalum, Solid Electrolyte. Deviations from the Generic Specification, applicable to this specification only, are detailed in Para 4.2.

Deviations from the applicable Generic Specification and this Detail Specification, formally agreed with specific Manufacturers on the basis that the alternative requirements are equivalent to the ESA/SCC requirements and do not affect the components' reliability, are listed in the appendices attached to this specification.

4.2 DEVIATIONS FROM GENERIC SPECIFICATION

4.2.1 <u>Deviations from Special In-process Controls</u>

None.

4.2.2 <u>Deviations from Final Production Tests</u> (Chart II)

None.

4.2.3 Deviations from Burn-in Tests (Chart III)

None.

4.2.4 Deviations from Qualification Tests (Chart IV)

None.

4.2.5 <u>Deviations from Lot Acceptance Tests (Chart V)</u>

None.

4.3 <u>MECHANICAL REQUIREMENTS</u>

4.3.1 <u>Dimension Check</u>

The dimensions of the capacitors specified herein shall be verified in accordance with the requirements set out in Para 9.3 of ESA/SCC Generic Specification No. 3011 and shall conform to those shown in Figure 2 of this specification.

4.3.2 Weight

The maximum weight of the capacitors specified herein shall be 0.1 grammes.

4.3.3 Adhesion

The requirements for adhesion are specified in Para 9.5 of ESA/SCC Generic Specification No. 3011.

4.3.4 <u>Damp Heat (Steady State)</u>

The requirements for damp heat (steady state) testing are specified in Section 9 of ESA/SCC Generic Specification No. 3011. The duration of the test shall be 56 days.

PAGE

9

ISSUE

4.4 Materials and Finishes

The materials and finishes shall be as specified herein. Where a definite material is not specified, a material which will enable the capacitors specified herein to meet the performance requirements of this specification shall be used. Acceptance or approval of any constituent material does not guarantee acceptance of the finished product.

4.4.1 <u>Case</u>

Not applicable.

4.4.2 Terminations

The capacitors shall be terminated in accordance with the requirements of ESA/SCC Basic Specification No. 23500, as follows:-

(a) Variant 01:

With clips or end caps Type 'E' with Type '2' finish.

(b) Variant 02:

With clips or end caps Type 'E' with Type '3' finish.

(c) Variant 03:

With pads of Silver Loaded Epoxy Resin with Type '2' finish.

(d) Variant 04:

With pads of Silver Loaded Epoxy Resin with Type '3' finish.

4.5 MARKING

4.5.1 General

The marking of all components delivered to this specification shall be in accordance with the requirements of ESA/SCC Basic Specification No. 21700 and the following paragraphs. These components being too small to accommodate the marking as specified hereafter, the marking information in full shall accompany each component in its primary package. The information to be marked and the order of precedence shall be as follows:-

- (a) The SCC Component Number.
- (b) Electrical Characteristics and Ratings.
- (c) Traceability Information.

4.5.2 The SCC Component Number

The SCC Component Number shall be constituted and marked as follows:-

	3011005 01B
Detail Specification Number	
Type Variant, (see Para. 4.4.2)	
Testing Level (B or C, as applicable)	

PAGE 10 ISSUE 1

4.5.3 <u>Electrical Characteristics and Ratings</u>

The electrical characteristics and ratings to be marked in the following order of precedence are:-

- (a) Capacitance value.
- (b) Tolerance.
- (c) Rated voltage.

The information shall be constituted and marked as follows:

	155K J
Capacitance value (1.5µF)	
Tolerance (± 10%)	
Rated voltage (40V)	

4.5.3.1 Capacitance

The capacitance values shall be expressed by means of the following codes. The unit quantity for marking shall be picofarads.

Capacitance Value	Code
XX10 ⁴	XX4
XX10 ⁵	XX5
XX10 ⁶	XX6

4.5.3.2 Tolerance

The tolerance on capacitance values shall be indicated by the code letters specified hereafter.

Tolerance (%)	Code letter
± 10	K
± 20	M

4.5.3.3 Rated Voltage

The rated voltage shall be indicated by the code letters specified hereafter.

Rated Voltage (V)	Code Letter
50	K
40	J
25	G
20	F
16	Ε
10	D
6.3	Α
4.0	M

PAGE 11

ISSUE

4.5.4 Traceability Information

Traceability information shall be marked in accordance with the requirements of ESA/SCC Basic Specification No. 21700. The information to be marked shall be as follows:-

- (a) Manufacturing date code.
- (b) Serial number.
- (c) Manufacturer's name.

4.5.5 Polarity

Polarity shall be indicated as given in Note 2 to Figure 2.

4.6 <u>ELECTRICAL MEASUREMENTS</u>

4.6.1 Electrical Measurements at Room Temperature

The parameters to be measured in respect of electrical characteristics are scheduled in Table 2. Unless otherwise specified, the measurements shall be performed at $T_{amb} = \pm 22 \pm 3$ °C.

4.6.2 <u>Electrical Measurements at High and Low Temperatures</u>

The parameters to be measured at high and low temperatures are scheduled in Table 3.

4.6.3 Circuits for Electrical Measurements

Not applicable.

4.7 BURN-IN TESTS

4.7.1 Parameter Drift Values

The parameter drift values applicable to burn-in are specified in Table 4 of this specification. Unless otherwise specified, the measurements shall be performed at $T_{amb} = +22\pm3$ °C. The parameter drift values (Δ) applicable to the parameters scheduled shall not be exceeded. In addition to these drift value requirements for a given parameter, the appropriate limit values specified in Table 2 shall not be exceeded.

On completion of burn-in, a recovery period of 24 ± 2 hours is necessary before the performance of the end measurements.

4.7.2 Conditions for Burn-in

The requirements for burn-in are specified in Section 7 of ESA/SCC Generic Specification No. 3011. The conditions for burn-in shall be as specified in Table 5(a) of this specification.

4.7.3 Electrical Circuit for Burn-in (Figure 5)

Not applicable.

4.8 <u>ENVIRONMENTAL AND ENDURANCE TESTS (CHARTS IV AND V OF ESA/SCC GENERIC SPECIFICATION NO. 3011)</u>

4.8.1 Measurements and Inspections on Completion of Environmental Tests

The parameters to be measured and inspections to be performed on completion of environmental testing are scheduled in Table 6. Unless otherwise specified, the measurements shall be performed at $T_{amb} = +22 \pm 3$ °C.

4.8.2 Measurements and Inspections at Intermediate Points during Endurance Tests

The parameters to be measured and inspections to be performed at intermediate points during endurance tests are scheduled in Table 6. The measurements shall be performed at the temperatures specified for the test.

4.8.3 <u>Measurements and Inspections on Completion of Endurance Tests</u>

The parameters to be measured and inspections to be performed on completion of endurance tests are scheduled in Table 6. Unless otherwise specified, the measurements shall be performed at $T_{amb} = +22\pm3$ °C.

4.8.4 Conditions for Operating Life Tests (Part of Endurance Testing)

The requirements for operating life testing are specified in Section 9 of ESA/SCC Generic Specification No. 3011. The conditions for operating life testing shall be as specified in Table 5(b) of this specification.

4.8.5 Electrical Circuit for Operating Life Tests (Figure 5)

Not applicable.
